## Work Zone Cam Construction Camera Technology is Called to Document T-Mobile Arena *Time-Lapse Movie Showcases Construction for New Las Vegas Entertainment Venue*

New York, April 12, 2016 – Located just west of the world famous Las Vegas strip, the newest venue in “The Entertainment Capital of the World” is ready to welcome the masses of excited spectators. After nearly two years of construction, T-Mobile Arena officially opened its doors on April 6th and Work Zone Cam is celebrating this milestone with the release of its new construction time-lapse movie.

MGM Resorts International relied on Work Zone Cam’s high-quality imagery and reliable service to document each stage of the construction process from May 2014 to April 2016. During those 23 months, Work Zone Cam’s [construction webcams](#) captured more than 49,000 high-definition megapixel images from both interior and exterior perspectives. The entire project can be seen from groundbreaking to completion in less than 2 minutes with this professional [time-lapse movie](#).

“Anticipation has been high since we first announced the new T-Mobile Arena and one of the most popular ways to include the public in this entire process was with views from our Work Zone Cam cameras,” said Ernesto Zita, Director of Operations, Production Services at MGM Resorts International. “Multiple Work Zone Cam construction webcams have documented the project for nearly two years and this time-lapse will be pivotal in showcasing the rising of our new arena for years to come.”

T-Mobile Arena is designed to provide the best in venue hospitality and operation. The multi-purpose facility can hold up to 20,000 spectators and will host a variety of events including concerts, boxing, award shows, basketball and more. Sustainability was a main initiative during the arena’s development, as it is aimed to receive LEED Gold Certification from the U.S. Green Building Council.
